

Business Sales Performance Analysis & Recommendations

Executive Summary

This report analyzes Superstore sales data using Microsoft Excel and Power BI to evaluate business performance, profitability, regional contribution, and product demand. The objective was to identify key trends and generate actionable recommendations to support business growth.

Key Findings

Overall Performance

- Total Sales: **\$2.30 Million**
- Total Profit: **\$286.40 Thousand**
- Profit Margin: **12.03%**
- The business maintains strong revenue generation with healthy profitability.

Regional Performance

- The **West Region** contributed the highest share of sales (31.6%).
- East Region followed as the second strongest market.
- South Region recorded the lowest contribution.

Category Analysis

- **Technology** generated the highest sales revenue.
- Furniture and Office Supplies contributed significantly but remained below Technology.

Sales Trend

- Sales increased steadily throughout the year.
- Peak performance occurred during the final months, indicating seasonal demand.

Product Insights

- **Canon imageCLASS** was the highest-selling product.
- **Phones** and **Chairs** were the top-performing sub-categories.

Recommendations

1. Increase marketing investment in the West Region to maximize revenue growth.
2. Expand Technology product offerings and promotional activities.
3. Improve inventory planning during high-demand periods.
4. Prioritize top-selling products and sub-categories in sales campaigns.
5. Develop targeted strategies for lower-performing regions to improve market penetration.

Conclusion

The analysis highlights strong business performance driven by the West Region, Technology category, and high-performing products. By focusing on these strengths while improving weaker segments, the company can increase profitability and support sustainable long-term growth.
